# Agenda

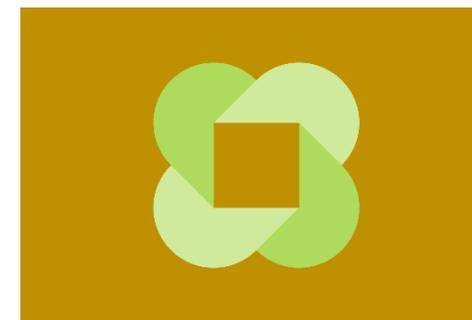

**Size of the prize**

**Why Symantec  
CASB**

**How to uncover  
an opp**

**How to engage  
to closure**

# The size of the prize

## Gartner

- 5% CASB market penetration in 2016 rising to 85% by 2020
- by 2020 95% of cloud data losses due to employees
- By 2018, the 60% of enterprises that implement CASB will experience one-third fewer security failures.
- By 2018, 40% of Office 365 deployments will rely on third-party tools, increase from fewer than 10% in 2015.

## Symantec

- 1000% CASB growth YoY in the UK, 3x growth Q on Q in the UK
- Average CASB deal size - \$100k
- Average CASB deal time – 75 days

## Strategic Planning Assumptions

Through 2020, 95% of cloud security failures will be the customer's fault.

By 2020, 85% of large enterprises will use a cloud access security broker platform for their cloud services, which is up from less than 5% today.

### 'Market Guide for CASB' October 20 2016:

## Strategic Planning Assumptions

By 2018, 40% of Office 365 deployments will rely on third-party tools to fill gaps in security and compliance, which is a major increase from less than 15% in 2016.

By 2020, 50% of organizations using Office 365 will rely on non-Microsoft security tools to maintain consistent security policies across their multivendor "SaaScape."

### How to Enhance the Security of Office 365 15 November 2016:

## Strategic Planning Assumptions

By 2018, the 60% of enterprises that implement appropriate cloud visibility and control tools will experience one-third fewer security failures.

By 2018, 40% of Office 365 deployments will rely on third-party tools to fill in gaps in security and compliance, which is a major increase from fewer than 10% in 2015.

CASB platforms deliver the best features and performance 24 February 2017

# Why enterprises need CASB

“ Find what cloud apps my users accessing and how risky they are.”

**Shadow IT**

“ Allow me to see where sensitive data is going into SaaS apps and help me control sharing”

**Shadow Data**

## Visibility

## Data Security

## Threat Protection

# CASB 1.0

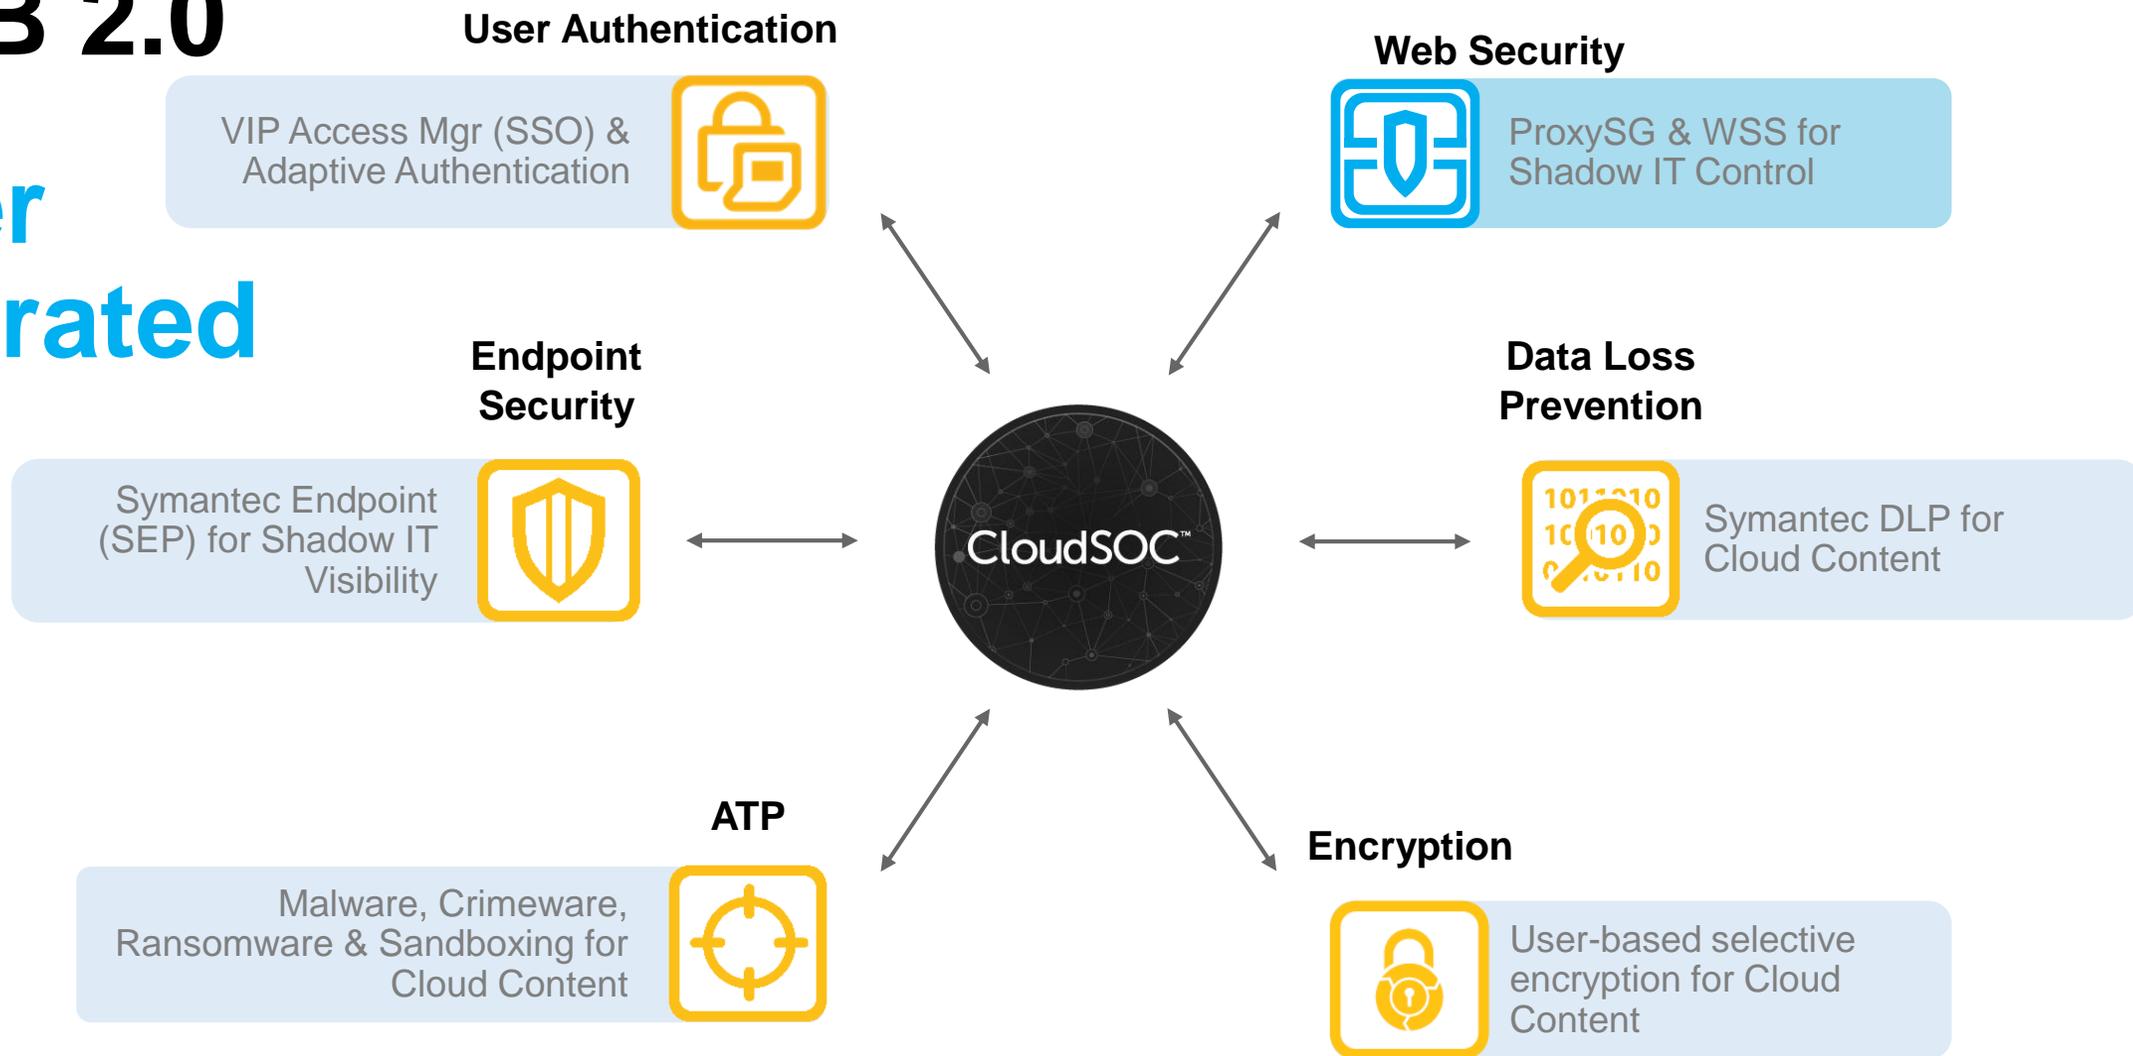

# Symantec\* Named a Leader with the Highest Score in Current Offering in Cloud Security Gateway (CASB)

*First Forrester Wave in Cloud Security Gateway*

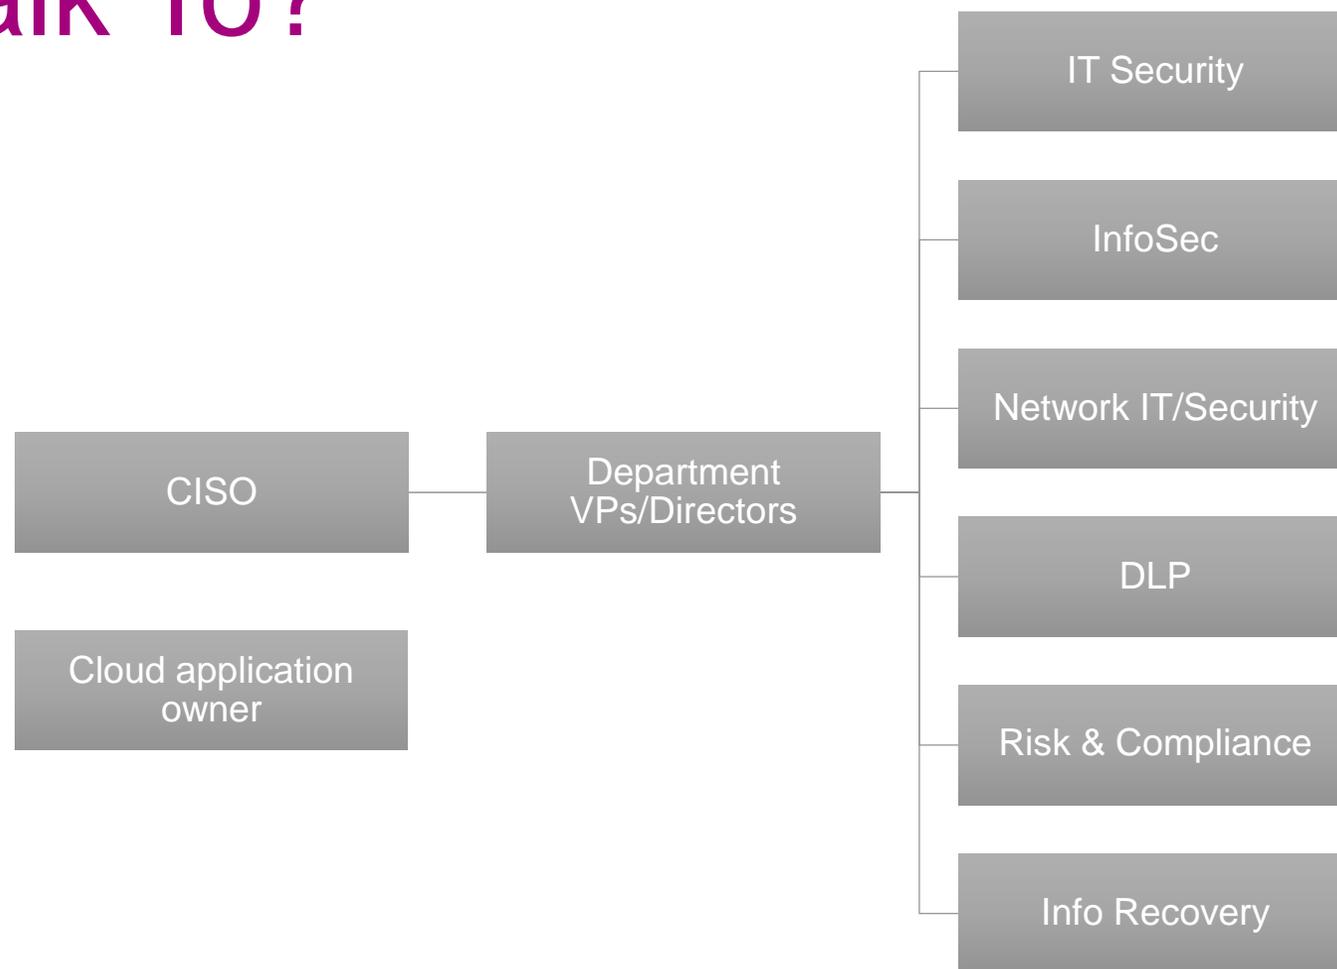

# CASB 2.0

## Hyper integrated

# Who Should You Talk To?

- Go as high as you can: the final decision is made or approved at the executive layer or CISO
- Often one department is the Buyer: who it is usually depends on use case
- Many departments can influence the Buyer: leverage the relationships you have
- After purchase: the trio who does most of the work to run the solution
  - IT Security Analyst
  - Network Security Architect
  - DLP Manager

# Your Conversation Starter

“Can we help you make sure you are not?”

“I’d like to give you a free Shadow IT Risk Assessment.”

“Take a look at CloudSOC Audit and ProxySG/WSS with AppFeed, and the integration with SEP.”

“Are you using or planning to adopt any cloud apps?”

*answer:*  
“I don’t know”  
Or  
“No”

“You likely have some cloud app use in your organization. On average, organizations discover they are using 928 cloud apps.

We’ve had customers certain they were not using cloud apps, who discover thousands of apps in use by their workforce.”

*answer:*  
“Yes”

“Are you doing anything to make sure confidential data shared in that app doesn’t get exposed?”

“I’d like to offer a free Shadow Data Risk Assessment for one of these apps.”

“What cloud apps do you use?”

If Office 365, Google Apps, Box, Dropbox, or Salesforce...

“Take a look at CloudSOC Securlets & Gateway, and integration with DLP, VIP, & ICE.”

“Do you already use any Symantec or Blue Coat products?”

If ProxySG or WSS...

“Would you like to discover and control use of Shadow IT in your organization?”

“On average, organizations discover about 928 cloud apps in use.”

**Introduce App Feed concept:**

- Gain visibility of 20K+ apps,
- Control use of these apps,
- Leverage existing ProxySG hardware vs. purchasing new boxes from CASB vendors,
- Harness CloudSOC for more in-depth analysis

“I’d like to give you a free Shadow IT Risk Assessment.”

“You can leverage your ProxySG and/or WSS with CloudSOC CASB for visibility and control over the use of cloud apps.”

**Introduce AppFeed and CloudSOC Audit.**

answer  
:DLP

“Would you like to extend your DLP to govern confidential data in cloud apps?”

“On average, organizations have 25-27% of cloud-stored files and emails that are exposed.”

**Introduce Quick DLP Benefits Overview:**

- Extend your existing DLP policies to the cloud without any modifications
- Leverage single console to manage DLP on prem and in cloud
- Avoid inefficiencies of ICAP solutions from 3rd party CASBs

“What apps do you use?”

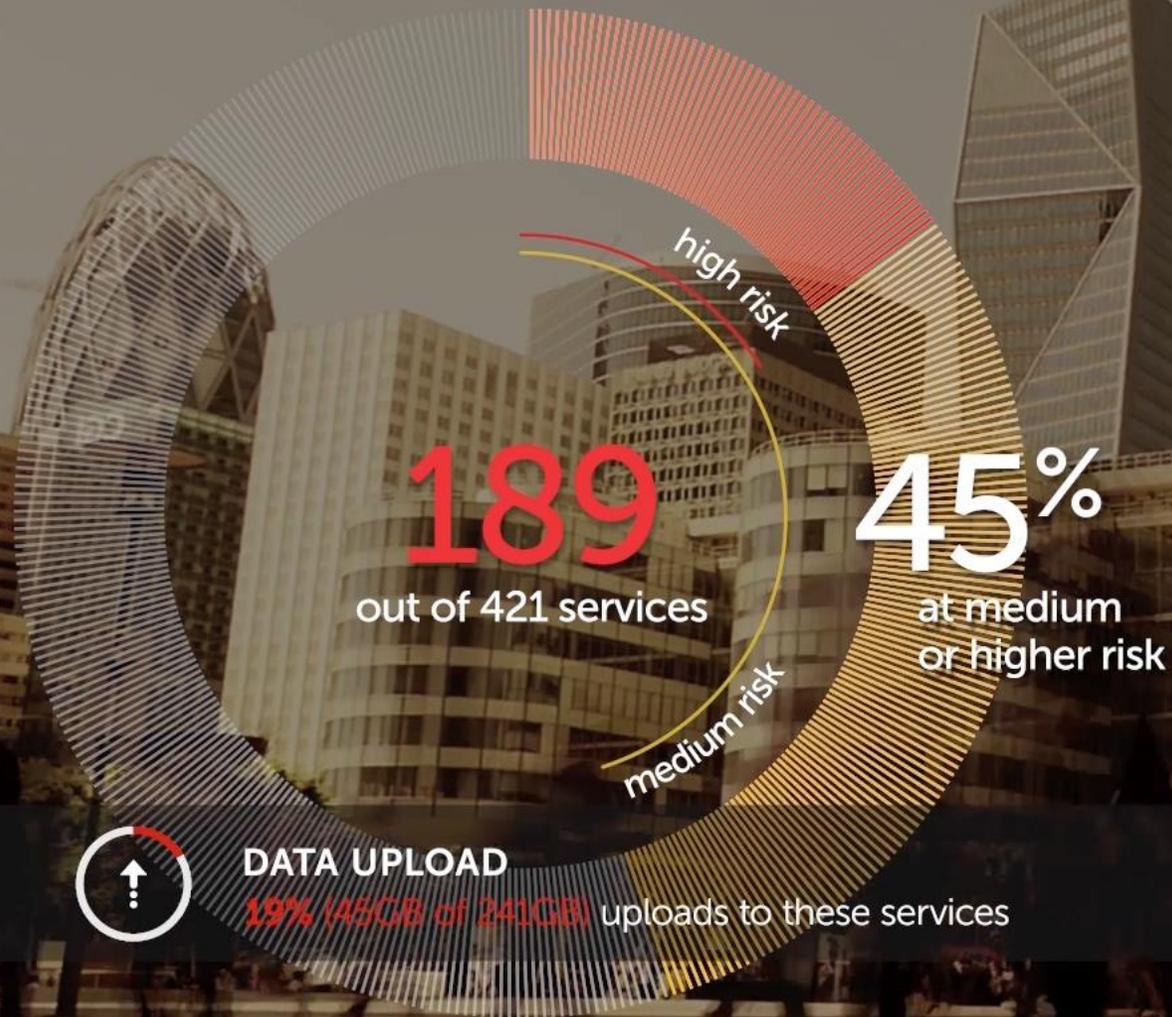

If use Office 365, Google Apps, Box, Dropbox, or Salesforce...

“I’d like to give you a free Shadow Data Risk Assessment.”

“You can remediate exposures and extend your existing DLP to the cloud with CloudSOC CASB for data security.”

**Introduce CloudSOC Securlets & Gateway and DLP Cloud integration, be sure to mention integration with VIP, & ICE too.**

# Shadow IT Risk Assessment

- Analytics on your cloud app risks and compliance issues
- App usage anomalies across your organization
- What apps you should sanction and what apps you should block

# Shadow Data Risk Assessment

- External and public content exposures, including compliance risks
- Inbound risky content shared with employees (e.g. malware, IP, etc)
- Risky users and user activities

Are you concerned about staying ahead of continuous and evolving threats (both intentional and unintentional) to your cloud-based infrastructure?

Do you have line of sight into and control over shadow IT?

Would you like integrated solutions that enable you to look holistically at your organisation, across regions, applications and business functions?

Symantec's Cloud Access Security Broker (CASB) can provide you with this visibility, control and protection, and empower you to confidently leverage cloud applications and services.

You can not only adopt secure, safe, compliant cloud-based infrastructures, but also gain critical visibility into shadow IT governance over data in cloud apps, and protection against threats targeting cloud accounts.

Key benefits of CASB include:
